

A workshop of things that play, make and remember

Eight major repos, eight distinct jobs	
Repo	What it does
Chirp / AVIARY	Browser instruments and reactive worlds. Gyre, Soar, MOLT, bird synths and listening surfaces explore different ways to play.
HALLIATUS / TALON	Music-judged mech tactics plus cockpit stations, a campaign and a creative workshop.
SaffronRider	An authored Tamil-flavoured tokusatsu world, film drafts and a game prototype.
Vantara Chronicles	A browser RPG prototype with an authored magitech world and four hero roles.
Photo Sharingan	A local-first cockpit for reviewing a photo shoot.
Video Sharingan	Local video analysis and editable cut plans, not a browser NLE.
Bestiary	The reusable memory and working-system hub.
Watchtower	The owner’s monitoring and reading site.

The shared value is the method; not every project shares the same engine.

Chirp’s Warble/Rookery are components, not new repos. MOLT directs reactive plates; TALON connects story/contracts/factories; Vantara’s generated-quest loop is still planned. The long guide explains what each model proves.

Source-inspection edition, 13 October 2026. Feature presence is not release readiness; no finished-film or universal shared-core claim.

Edition 13 October 2026. Source evidence is dated; screenshots illustrate surfaces, not comprehensive product tests. See the edition pack’s source notes.
